

## Laboratorio - Routing en Angular

El presente laboratorio servirá para implementar conceptos sobre routing en Angular

En primer lugar se va a crear el proyecto uso-routing

```
C:\Windows\system32\cmd.exe
Microsoft Windows [Versión 10.0.19043.1415]
(c) Microsoft Corporation. Todos los derechos reservados.

C:\tareatacna>ng new uso-routing
? Would you like to add Angular routing? Yes
? Which stylesheet format would you like to use? CSS
CREATE uso-routing/angular.json (3069 bytes)
CREATE uso-routing/package.json (1075 bytes)
CREATE uso-routing/README.md (1056 bytes)
CREATE uso-routing/tsconfig.json (863 bytes)
CREATE uso-routing/.editorconfig (274 bytes)
CREATE uso-routing/.gitignore (620 bytes)
CREATE uso-routing/.browserslistrc (600 bytes)
CREATE uso-routing/karma.conf.js (1428 bytes)
CREATE uso-routing/tsconfig.app.json (287 bytes)
CREATE uso-routing/tsconfig.spec.json (333 bytes)
CREATE uso-routing/.vscode/extensions.json (130 bytes)
CREATE uso-routing/.vscode/launch.json (474 bytes)
CREATE uso-routing/.vscode/tasks.json (938 bytes)
CREATE uso-routing/src/favicon.ico (948 bytes)
CREATE uso-routing/src/index.html (296 bytes)
CREATE uso-routing/src/main.ts (372 bytes)
CREATE uso-routing/src/polyfills.ts (2338 bytes)
CREATE uso-routing/src/styles.css (80 bytes)
```

Dentro de la aplicación se modificará el componente app:

### **app.component.ts**

```
import { Component } from '@angular/core';
```

```
@Component({
  selector: 'app-root',
  templateUrl: './app.component.html',
  styleUrls: ['./app.component.css']
})
export class AppComponent {
  title = 'Routing con Angular 12';
}
```

### **app.component.html**

```
<div style="text-align:center">
  <h1>
    Bienvenido a {{ title }}!
```

```

    </h1>
    <h2>
        Leer <a href="https://angular.io/start">Sitio Oficial
de Angular</a> y
        <a href="https://blog.angular.io/angular-v12-is-now-
available-32ed51fbfd49">Datos de Angular 12</a>
    </h2>

```

```

        <a [routerLink]="[{ outlets: { primary:
['products'], sidebar: ['products'] } }]">
            Productos
        </a>

```

```

</div>

```

```

<div>
    <div style="float:right">
        <router-outlet></router-outlet>
    </div>
    <div style="float:left">
        <router-outlet name="sidebar"></router-outlet>
    </div>
    <div style="float:center">
        <app-home></app-home>
    </div>
</div>

```

#### **app.component.css**

```

ul {
    text-align: center;
}

```

Luego, se crean los componentes necesarios para mostrar el uso de routing.

#### **a. Componente Home**

El código a realizar será en home.component.html

### home.component.html

```
<div style="text-align:center">
```

```
  <h1>
```

```
    Inicio
```

```
  </h1>
```

```
<p [align]="alinear">
```

```
  Es una aplicacion que muestra el uso de Angular Router.
```

```
</p>
```

```
</div>
```

### b. product.ts

Es la clase que contiene los datos de los productos

```
export class Product {
  id: number;
  name: string;
  constructor(id: number, name: string) {
    this.id = id;
    this.name = name;
  }
}
```

### c. Componente sidebar

### sidebar.component.html

```
<div id="container">
  <!-->
  <table cellpadding="10">
<tbody>
  <tr>
    <th style="text-align: right;">
      Empresa:
    </th>
    <td>
      New Horizons
    </td>
  </tr>
  <tr>
    <th style="text-align: right;">
      E-mail:
    </th>
    <td>
      jguerra@newhorizons.pe
    </td>
  </tr>
  <tr>
    <th style="text-align:right;vertical-align:text-top;">
      Desarrollo:
    </th>
    <td>
      <p>
        Aplicacion en Angular 12,<br>
        Mostrar el uso de routing<br>
        Enero 2022
      </p>
    </td>
  </tr>
</tbody>
</table>
</div>
```

```

        </p>
      </td>
    </tr>
  </tbody>
</table>
</div>

```

#### d. Componente product-list-sidebar

Sin cambios

#### e. product-list

En este caso se coloca el código en *product-list.component.ts*

#### product-list.component.ts

```

import { Component, OnInit } from '@angular/core';
import { Product } from 'src/app/models/product';

@Component({
  selector: 'app-product-list',
  templateUrl: './product-list.component.html',
  styleUrls: ['./product-list.component.css']
})
export class ProductListComponent implements OnInit {

  public products: Product[] = [
    new Product(1, "Product 001"),
    new Product(2, "Product 002"),

```

```

    new Product(3, "Product 003"),
    new Product(4, "Product 004"),
    new Product(5, "Product 005"),
    new Product(6, "Product 006"),
    new Product(7, "Product 007"),
    new Product(8, "Product 008")
  ];

```

```

constructor() { }

```

```

ngOnInit() {
}
}

```

#### **product-list.component.html**

```

<h1>Lista de Productos</h1>

```

```

<ul>
  <li *ngFor="let product of products">
    <a [routerLink]="['/product/',
product.id]">{{product.name}}</a>
  </li>
</ul>

```

```

<a routerLink="/">Ir a Inicio</a>

```

#### **f. Componente product-detail**

#### **product-detail.component.ts**

```

import { Component, OnInit } from '@angular/core';
import { Product } from 'src/app/models/product';

```

```

import { ActivatedRoute } from '@angular/router';

@Component({
  selector: 'app-product-detail',
  templateUrl: './product-detail.component.html',
  styleUrls: ['./product-detail.component.css']
})
export class ProductDetailComponent implements OnInit {

  public products: Product[] = [
    new Product(1, "Product 001"),
    new Product(2, "Product 002"),
    new Product(3, "Product 003"),
    new Product(4, "Product 004"),
    new Product(5, "Product 005"),
    new Product(6, "Product 006"),
    new Product(7, "Product 007"),
    new Product(8, "Product 008")
  ];
  product: Product = this.products[0];

  constructor(private route: ActivatedRoute) { }

  ngOnInit() {
    this.route.params.subscribe(params => {
      this.products.forEach((p: Product) => {
        if (p.id == params['id']) {
          this.product = p;
        }
      });
    });
  }
}

```

### **product-detail.component.html**

```
<h1>Detalle de Producto</h1>
Informacion de Producto: id: {{product.id}} || nombre:
{{product.name}}
<br><a routerLink="/products">Ir a Lista de productos</a>
```

Luego de la creación de los componentes, se debe configurar app.module, lo que se codificara de la siguiente manera:

### **app.module.ts**

```
import { NgModule } from '@angular/core';
import { BrowserModule } from '@angular/platform-browser';

import { AppRoutingModuleModule } from './app-routing.module';
import { AppComponent } from './app.component';
import { HomeComponent } from './home/home/home.component';
import { ProductDetailComponent } from './product-
detail/product-detail/product-detail.component';
import { ProductListComponent } from './product-list/product-
list/product-list.component';
import { ProductListSidebarComponent } from './product-list-
sidebar/product-list-sidebar/product-list-sidebar.component';
import { SidebarComponent } from
'./sidebar/sidebar/sidebar.component';

@NgModule({
  declarations: [
    AppComponent,
    HomeComponent,
    ProductDetailComponent,
    ProductListComponent,
    ProductListSidebarComponent,
    SidebarComponent
  ],
  imports: [
    BrowserModule,
    AppRoutingModuleModule
```

```

    ],
    providers: [],
    bootstrap: [AppComponent]
  })
  export class AppModule { }

```

### **app.routing.module.ts**

```

import { NgModule } from '@angular/core';
import { RouterModule, Routes } from '@angular/router';
import { ProductDetailComponent } from '../product-detail/product-detail.component';
import { ProductListComponent } from '../product-list/product-list.component';
import { ProductListSidebarComponent } from '../product-list-sidebar/product-list-sidebar.component';
import { SidebarComponent } from '../sidebar/sidebar.component';

const routes: Routes = [
  { path: "products", component: ProductListComponent },
  { path: "product/:id", component: ProductDetailComponent },
  {
    path: "",
    component: SidebarComponent,
    outlet: "sidebar"
  },
  {
    path: "products",
    component: ProductListSidebarComponent,
    outlet: "sidebar"
  }
];

@NgModule({

```

```
imports: [RouterModule.forRoot(routes)],  
exports: [RouterModule]  
}))  
export class AppRoutingModule { }
```
